**RE: Made In the USA Project Requirements and Certifications**

This letter confirms that Central States Manufacturing, Inc. (“Central States”) has the capability, material sourcing, and manufacturing infrastructure to produce metal building and roofing products that qualify for Made in the USA requirements when specified at time of order.

When customer project requirements are identified in advance, Central States can provide products that meet applicable domestic content and manufacturing standards, including but not limited to:

- 100% domestically sourced steel, produced and melted in the United States
- 100% U.S.-based manufacturing, including roll forming, fabrication, and finishing performed at Central States’ U.S. manufacturing facilities
- Compliance with applicable Buy America / Build America, Buy America Act (BABAA) and AIS requirements, where project specifications and material availability allow

Central States works closely with domestic steel mills and internal purchasing, production, and quality teams to ensure that qualifying material is allocated, tracked, and manufactured in accordance with project requirements. *Proper notification at the time of quotation and order placement is required to ensure compliance and documentation eligibility.*

**Final Project Documentation**

For qualifying projects, Central States can provide the appropriate documentation and traceability after production, including mill certifications and verification supporting domestic origin and U.S. manufacturing.

This letter is intended to confirm manufacturing capability for quoting, bidding, and pre-qualification purposes and does not replace project-specific certifications, which are issued following production and verification.

If additional information is required, please contact your Central States sales representative.

Sincerely,

Andrew Wilson  
Chief Engineering and Innovation Officer  
Central States Manufacturing, Inc.
