**Notice:** The application and detail drawings in this manual are strictly for illustration purposes and may not be applicable to all building designs or product installations. Projects should conform to local building codes. Central States Manufacturing is not responsible for the performance of the material if it is not installed correctly.

Information contained in this booklet was in effect at the time of publication and is subject to change without notice.

# **IMPORTANT INFORMATION**

This manual contains suggestions and guidelines on how to erect your Centra Series building. The drawings in this guide are for illustration purposes only and may not apply to all building designs or product applications. The installation details shown are proven methods of construction, but are not intended to cover all instances, building requirements, designs, or codes. It is the responsibility of the designer/installer to ensure that the details meet particular building requirements. The details may require changes or revisions due to each project's conditions. It is the buyer's responsibility to verify all applicable code requirements, check all measurements, and determine suitability of product for the job. Failure to comply with stated recommendations relieves the manufacturer of responsibility for any damage or deterioration of the product incurred and voids any applicable warranty. Central States Manufacturing reserves the right to modify, without notice, information in this guide.

# SAFETY

Each job site presents different hazards; therefore it is the responsibility of the buyer/installer to determine the safest way to erect your Centra Series building based on the recommended instructions contained in this guide. Provide crew members working on the project with required safety railing, netting or safety lines. If you must walk on a metal roof, take great care.

#### CAUTION

Always wear heavy gloves when working with steel panels to avoid cuts from sharp edges. When power cutting or drilling steel panels, always wear safety glasses to prevent eye injury from flying metal fragments. Metal panels can become slippery, so always wear shoes with nonslip soles. Avoid working on metal roofs during wet conditions when the panels can become extremely slippery. If you must walk on the roof, always walk on the purlins, never between. OSHA safety regulations should be complied with at all times.

# CARE AND HANDLING

#### STAGE

Galvalume® steel sheets have a good service life when exposed to normal weather conditions however, to protect the appearance of panels and trims from damage, there are a few simple precautions that can be taken. The steel sheets are subject to stain when water sits upon, or becomes trapped between the sheets. If the Galvalume® sheets are to be stored for any period of time, they should be stored only in a dry place, preferably under a roof. Stand panels on end and fan them out at the bottom to provide air circulation and moisture run off. If space does not allow this, the panels should be separated, blocked off of the floor at least 12 inches to allow air flow, and stored at an incline to encourage drainage. The panels should then be covered, yet still have good air flow through the sheets to prevent condensation. Do not use a plastic cover, as this may cause the panels to sweat or condensation to occur.

#### CUTTING

A portable field shear is the ideal method for cutting panels. Nibblers or a power shear may also be used. Although we do not recommend it, if you decide to cut with a saw, it is very important that the panels be turned upside down during cutting so that hot shavings do not come in contact with the painted surface. Make sure all adjacent panels are covered so that shavings are not imbedded in these panels. If metal shavings become imbedded in the paint surface, they will quickly rust. To avoid this, panels should be thoroughly wiped of all filings on both sides of the panel. Failure to comply with the recommended cutting procedures releases the manufacturer of any responsibility. Do not use a graphite pencil to mark on the panel. Graphite marks may be hard to remove and will lead to discoloration and corrosion.

#### STORAGE

Failure to follow these steps may result in wet storage stains and premature rusting. The manufacturers warranty will be void at this time, and the manufacturer will not be responsible.

#### HANDLING

When unloading panels, extreme caution must be employed. Care needs to be used when unloading panels with a forklift. Panel edges and underside paint may become damaged if the forklift driver does not use caution. Once at the job site, care must be taken in order to protect the painted surface. When unbundling the panels, never drag them across the surface of one another. This may cause scratches across the underneath panels. It is recommended that the panels be "rolled" off the top of the bundle to prevent scratching. Never lift panels by the ends, instead lift the panels longitudinally and carry vertically.

Panel edges are very sharp, therefore, safety equipment should be worn by all workers handling the material.

#### DRILLING

Panels should not be drilled while stacked. This will cause shavings that will become imbedded in the paint surface.

#### **INSTALLING WALL PANELS**

Panels and trim are subject to staining and premature rusting in conditions where moisture accumulates causing the exposed panel edge to stand in water. This may happen at the wainscot, head trim, or rat guard due to improper installation. Contractors should leave 1/8" space between wainscot trim and upper wall panel to prevent rusting and discoloration.

Shavings created by saw cutting or drilling may cause the panel to rust and will void warranties in affected areas.

# PARTS LIST ACCESSORIES

# PARTS LIST FASTENERS

#### THIS SECTION IS INTENDED FOR YOUR CONCRETE FOUNDATION SPECIALIST

NOTE: All Base Plates at 100'-0" (U.N.)

### Detail C

### THIS SECTION IS INTENDED FOR YOUR CONCRETE FOUNDATION SPECIALIST

### **ANCHOR BOLT PROJECTION**

1. The metal building manufacturer is responsible for the design of the anchor bolt diameter only to permit the transfer of forces between the base plate and the anchor bolt in shear, bearing and tension, but is not responsible for the anchor bolt embedment for transfer of forces to the foundation. The metal building manufacturer does not design and is not responsible for the design, material and construction of the foundation embedments. The end use customer should assure himself that adequate provisions are made in the foundation design for loads imposed by column reactions of the building, other imposed loads, and bearing capacity of the soil and other conditions of the building site. It is recommended that the anchorage and foundation of the professional engineer experienced in the design of such structures, (section a3 mbma 2006 metal building systems manual).

2. Bottom of all base plate are at the same elevation. (Unless noted)

# **PROJECT OVERVIEW**

#### **Completed Frame Structure**

The above drawing shows the completed frame structure and columns labeled. The columns will be called out periodically throughout the instructions.

# **PROJECT OVERVIEW**

### **Completed Structure**

The following instructions are to assemble the building as shown above. There will be optional variations to the buildings layout called out on certain pages. Follow those instructions as they pertain to your needs.

### Assemble Columns A and F

Note: Place level on all girt clips throughout installation to ensure level girts.

- 1. Layout (2) PURLIN25 sidewall columns for column A.
- 2. Attach (1) PLATE43 using FAST54.
- 3. Attach (2) PLATE35 with PLATE45 between columns as shown using FAST54.
- 4. Attach (1) PLATE42 with (2) PLATE35 using FAST54 as shown.
- 5. Repeat these steps for Column F.

6 Set assembled columns aside for later use.

### **REQUIRED PARTS**

(2) PURLIN27 (10) PLATE35 FAST54

## DIRECTIONS

#### Assemble Columns B and E

- 1. Layout (1) PURLIN27 corner column for column B.
- 2. Attach (1) PLATE35 at bottom using FAST54.
- 3. Attach (2) PLATE35 at 3'6" using FAST54.
- 4. Attach (2) PLATE35 at 7'4" using FAST54.
- 5. Repeat these steps for column E.
- 6. Set assembled columns aside for later use.

### DIRECTIONS

### Assemble Columns C and D

- 1. Layout (1) PURLIN28 corner column for column C.
- 2. Attach (1) PLATE35 at bottom using FAST54.
- 3. Attach (2) PLATE35 at 3'6" from bottom using FAST54.
- 4. Attach (2) PLATE35 at 7'4" from bottom using FAST54.
- 5. Repeat these steps for column D.

### Stand and Anchor Columns A, B, C, D, E and F

Note: Anchor bolts and nuts are not included in building package. Anchor bolts are placed by your foundation specialist when laying foundation and corresponding nuts will be provided by your foundation specialist.

### DIRECTIONS

### **Attaching Zee Girts**

Note: Do not overtighten bolts on wall girts until columns are vertically level. Then tighten bolts. This applies throughout installation.

1. Attach PURLIN31 between columns B & C and D & E using FAST54 as shown.

2. Attach PURLIN32 between columns C and D using FAST54 as shown.

### DIRECTIONS

### **Attaching Zee Girts**

1. Attach PURLIN33 between columns B and A and between columns E and F using FAST54 as shown.

REQUIRED PARTS (1) PURLIN27 (5) PLATE35

FAST54

### DIRECTIONS

### Assemble Column G

- 1. Layout (1) PURLIN27 column for column G.
- 2. Attach (1) PLATE35 at bottom using FAST54.
- 3. Attach (2) PLATE35 at 3'6" from bottom using FAST54.
- 4. Attach (2) PLATE35 at 7'4" from bottom using FAST54.
- 5. Set assembled column aside for later use.

### DIRECTIONS

#### **Assemble Column J**

- 1. Layout (1) PURLIN27 column for column J.
- 2. Attach (1) PLATE35 at bottom using FAST54.
- 3. Attach (1) PLATE35 at 3'6" from bottom using FAST54.
- 4. Attach (2) PLATE35 at 7'4" from bottom using FAST54.
- 5. Set assembled column aside for later use.

*If you are removing standard framed opening. Refer to page 68 for assembly instructions.* 

**REQUIRED PARTS** 

PURLIN28
PLATE35
FAST54
FAST46

### DIRECTIONS

### **Assemble Columns H**

Note: Adjust the top PLATE35 location to accommodate the door height.

- 1. Layout (1) PURLIN28 column for column G.
- 2. Attach (1) PLATE35 at bottom using FAST46.
- 3. Attach (1) PLATE35 at 3'6" from bottom using FAST46.
- 4. Attach (1) PLATE35 at 7'4" from bottom using FAST46.
- 5. Attach (1) PLATE35 at desired door height using FAST54. (9' is shown above)
- 6. Set assembled column aside for later use.

#### **REQUIRED PARTS**

(1) PURLIN28(3) PLATE35FAST54FAST46

### DIRECTIONS

### **Assemble Columns I**

Note: Adjust the TOP GIRTCLIP location to accommodate the door height.

- 1. Layout (1) PURLIN28 column for column I.
- 2. Attach (1) PLATE35 at bottom using FAST46.
- 3. Attach (1) PLATE35 at 7'4" from bottom using FAST46.
- 4. Attach (1) PLATE35 at matching height as previous step using FAST54.

### DIRECTIONS

### Stand and Anchor Columns G, H, I, and J

Note: Anchor bolts and nuts are not included in building package. Anchor bolts are placed by your foundation specialist when laying foundation and corresponding nuts will be provided by foundation specialist.

### DIRECTIONS

### **Attaching Zee Girts**

1. At 3'6" and 7'4" from bottom of column, attach PURLIN31 between columns G and H using FAST54 as shown. 2. At 7'4" from bottom of column. Attach PURLIN31 between columns I and J using FAST54 as shown.

### DIRECTIONS

### **Attaching Zee Girts**

- 1. Attach PURLIN33 between columns A, J, F, and G as shown. Use FAST54 to fasten to girt clips.
- 2. Attach PURLIN34 between columns H and I. PURLIN34 can be placed at 7', 8' or 9' depending on the height on the door. Adjust the top GIRTCLIP location on column I & H to accommodate the door. Example shown above is at 9'. This height was set in previous step. Use FAST46 to fasten to girt clips.

### DIRECTIONS

### **Assemble Center Rafters**

- 1. Layout (2) PURLIN26 rafters.
- 2. Attach (1) PLATE41 peak plate using FAST54.
- 3. Attach (1) PLATE45 between columns using FAST54.
- 4. Repeat steps 2 and 3 to opposite side of PLATE41 to complete center rafter assembly.

# DIY Alternate Method: If lifting machinery is not being used, stand center rafters **REQUIRED PARTS** and hold in place with 2x4 bracing. Then lift and install PLATE41. FAST54 See instructional video for visualization. F $\lambda$ A @ @ @ 88 88 0 0

### DIRECTIONS

### **Stand and Install Center Rafter**

Note: This step will require lifting machinery due to height and weight of components. Follow OSHA safety requirements for your area.

- 1. Lift full rafter assembly from the previous step over columns A and F.
- 2. Bolt center rafter to PLATE42 at top of columns A and F using FAST54.

## DIRECTIONS

### **Assemble Endwall Rafters**

1. Attach (1) PLATE44 to (1) PURLIN26 using FAST54.

2. Repeat for 2nd endwall rafter.

### DIRECTIONS

### Assemble and Install Endwall Rafters

Note: Keep PLATE44 facing interior of building.

1. Attach assembly from previous step to the top of columns J and I using FAST54.

2. Repeat this installation over columns D and E.

### DIRECTIONS

### Assemble and Install Endwall Rafters

1. Attach (1) PURLIN26 to the top of columns B and C and attach to installed PLATE44 using FAST54.

2. Repeat this installation over columns H and G.

Note: Base angle is installed to protect the panel edge from concrete corrosion.

### DIRECTIONS

### **Install Base Angle**

Note: When using the FAST55, you will need to predrill 1.25" holes in concrete, and then tap in the FAST55 to secure the base angle. When tapping in the FAST55, do not hit the pin at the top until the fastener is all the way in the hole. The pin expands the fastener to hold it in place, so this needs to be hit when the fastener is completely in the hole.

1. Install PURLIN36 between columns E & G and B & J using FAST55.

2. Install PURLIN37 between columns C & D using FAST55.

3. Install PURLIN38 between columns B & C, D & E, and G & H.

4. Install PURLIN39 to the outside columns B, E, G, and J. This will give support when fastening trim.
#### **REQUIRED PARTS**

(3) TRIM24 FAST13

## DIRECTIONS

### **Trim Framed Opening**

- Install TRIM24 along columns I and H. Cut length to fit between floor and wall girt at top of framed opening. Fasten to column with FAST13 every 24". Fasten along inside edge facing the interior of building. The other edge will be fastened in later steps.
- Install TRIM24 along the wall girt between Columns I and H. This is the top of your framed opening. Fasten to header with FAST13 every 24". Fasten along inside edge facing the interior of building. The other edge will be fastened in later steps.
- 3. If necessary, miter the corners of the trim to create a finished look where pieces meet in the corner.

**REQUIRED PARTS** 

(1) DOOR47
(1) DOOR48
FAST12
FAST55

### DIRECTIONS

### **Option 1: Installing walk door in location shown above**

Note: Determine where you would like to install your walk door. Illustration above shows walk door between columns J and I, but door can be located in any location.

- 1. Assemble DOOR47 and DOOR 48 as describes in manufacturer's instructions included with product.
- 2. Stand DOOR48 into position and secure using FAST12 to zee girt at 7'4" height. Install between columns J and I.
- 3. Use FAST55 to fasten bottom of DOOR48 to concrete.
- 4. Install DOOR47 into DOOR48 using manufacturer's instructions included with product.

# STEP 21 CONT.

## DIRECTIONS

#### Option 2: Installing door into a alternate location

- 1. Remove the zee at 3'6" height previously installed in the bay you wish to install your walk door.
- 2. Install a PURLIN31 between columns J & I.
- 3. Follow STEPS 1-4 listed in Option 1.
- 4. Measure the distance from between the DOOR48 and column. Cut the removed zee girt from step 1 in Option 2 to fit between the column and DOOR48. (You are basically cutting a gap into the wall girt to allow for the walk door.)
- 5. Install the newly-cut zee girt between the column and DOOR48 using FAST12. Do this on both sides of DOOR48 if necessary.

#### **REQUIRED PARTS**

(1) TRIM26
(2) TRIM27
(2) TRIM23
(1) TRIM22
FAST24

### DIRECTIONS

### **Trim Framed Opening**

- 1. Install TRIM23 along columns I and H, with the mouth of trim facing outward as shown. Fasten to exterior side of the building with FAST24 every 24". FAST24 will go through TRIM23 and TRIM24 to fasten both to purlin.
- 2. Install TRIM22 along wall girt between column H & I, with the mouth of trim facing upward as shown. Fasten to exterior side of building with FAST24 every 24". FAST24 will go through TRIM22 and TRIM24 to fasten both.
- 3. Repeat previous steps for the walk door with TRIM26 and TRIM27.

### Install Ratguard Trim

Note: In this step, you will be installing the trim along the bottom of the building. This trim is available in lengths of 14'2" (TRIM16) and 12'2" (TRIM15). These pieces will be cut as needed to fit around the building. They will not be installed where any opening or doors are located. (overlap as necessary)

1. Cut TRIM16 and install as shown, fastening to base angle (PURLIN36-40) with FAST24 as needed.

2. Repeat this step around the base of the building, except in spaces for framed openings and walk doors.

## DIRECTIONS

### **Install Eavestruts**

Bolt PURLIN30 on top of column F and G using FAST54 as shown above.

### DIRECTIONS

Install Eavestruts

Repeat previous step between Column B & A, Column A & J, and Column E & F.

## DIRECTIONS

#### **Install Roof Purlins**

*Note: The bolt along the center rafter is temporary.(Do not over tighten)* Install PURLIN29 between endwall rafter and center using FAST54 as shown above.

#### **REQUIRED PARTS**

(1) PURLIN29 FAST54

### DIRECTIONS

### **Install Roof Purlins**

*Note: Remove the bolt from the center rafter before installing PURLIN29.* Install PURLIN29 over center rafter as shown above.

## DIRECTIONS

### **Install Roof Purlins**

Use FAST54 to reinforce overlapped PURLIN29 through the web.

### DIRECTIONS

### **Install Roof PURLINS**

Repeat steps 26-28 to install the remaining roof PURLINS.

NOTE: After completing STEP29, ensure that building is square by placing a strap on each corner and ratcheting corner columns until they are level. Then tighten all bolts on building while strapping is still in place. Remove strapping after bolts are properly tightened.

## DIRECTIONS

### **Install Rake Angle**

Install PURLIN41 above endwall rafter using FAST24 as shown above.

## DIRECTIONS

### **Install Wall Sheeting**

Note: Before installing, take note to which direction the prevailing winds come from at your location. You will want to begin installing panels on the end that is farthest away from the prevailing wind direction. This will allow the panel overlaps to not be exposed to the highest wind. (For example, if the strongest wind typically comes from the West, begin installing panels on the East end of your wall. Begin on the sidewall with the least amount of framed openings.) 1.Install one sheet of PANEL11 at the edge of your sidewall. Fasten PANEL11 to the wall girts using FAST12.

- Be careful to note the under lap and the overlap side of the panel.
- 2. Follow the diagram for fastener pattern at bottom and top of panel.
- 3. Follow the diagram for fastener pattern at 3'6" and 7'4" wall girt.

### DIRECTIONS

### **Install Wall Sheeting**

- 1. Repeat STEP 31 for the 7 remaining panels of the sidewall, overlapping panels as shown in the diagram.
- 2. Use FAST12 to secure the panels to the purlins. Use FAST13 when securing the panels together.
- 3. If necessary, measure and cut panels to allow for framed openings and walkdoors.

### DIRECTIONS

### **Install Wall Sheeting**

- 1. Repeat STEP 31 and 32 for the other sidewall.
- 2. If necessary, measure and cut panels to allow for framed openings and walkdoors.

### DIRECTIONS

### **Install Wall Sheeting**

- 1. Assemble the panels shown above for the end wall. Cut panels to follow roof line.
- 2. Use the diagram on page 51 for the screw placement. Follow diagram A for fastener pattern at bottom and top of panel. Follow diagram B for fastener pattern at 3'6" and 7'4" wall girt.
- 3. If necessary, measure and cut panels to allow for framed openings and walkdoors.

### DIRECTIONS

### **Install Remaining Wall Panels**

- 1. Assemble the panels shown above for the front wall. Cut panel tops to follow roof line.
- 2. Use the diagram on page 53 for the screw placement. Follow diagram A for fastener pattern at bottom and top of panel. Follow diagram B for fastener pattern at 3'6" and 7'4" wall girt.
- 2. If necessary, measure and cut panels to allow for framed openings and walkdoors.

## DIRECTIONS

### Install TRIM21

Install all 4 TRIM21 with FAST23 along the corners of the wall panels. Place fasteners to match fastener line on wall panels (do not overtighten). The above diagram shows the fastener placement location.

#### Install TRIM14

- 1. Place ACC50 on top of TRIM14 before installing. Line up rib profile of closure with wall panel rib profile. Place on edge of top leg of trim.
- 2. Install TRIM14 above the eavestrut (PURLIN30) as shown above using FAST12. Use only enough screws to temporarily hold in place. These screws will be removed when installing roof panels.
- 3. Repeat on both sidewalls.

If you are installing gutters, please go to page 70 before proceeding.

### DIRECTIONS

#### **Begin Sheeting the Roof**

Note: Before sheeting the roof take note of the direction the prevailing winds come from.

Start with the end that is opposite from your prevailing wind direction.

- 1. Use the above diagram for the fastener patterns when installing panels using FAST3.
- 2. Let the panel hang 3" over TRIM14.
- 3. Do not fasten at the ridge. This will be fastened when installing the ridgecap.

## DIRECTIONS

#### **Finish Sheeting the Roof**

- 1. Use FAST3 to secure panels to the purlins. Use FAST4 when securing the panels together.
- 2. Do not overlap roof panel more than one rib, if the length of your building is not divisible by 3 then your last panel will need the excess cut off.
- 3. Install all of one side then in the same direction, install the opposite side. Ensure every panel installed on the opposite side is directly across from an equal rib. This will allow the formed ridge cap to be easily installed.
- 4. Prior to taking the panel to the roof, install a single run of ACC51 to the underside of the what will become the overlap rib; leaving one side of the wax paper installed that will be removed once the panel is placed into position on the roof. (removing wax paper before in position or not applying before taking the panel to the roof may be more difficult, as the butyl tape will adhere to any metal it comes in contact with)

### DIRECTIONS

#### **Install the Ridge Cap**

- 1. Once all of the roof panels are installed with an inside closure above the eave trim at the low eave, and butyl tape at every lap then you may begin installing your roof formed ridge caps.
- 2. While on the ground, run ACC51 around three sides of your ridge cap.
  - a. The bottom of your overlap rib.
  - b.The full 3' length on the bottom of both sides, 2" from the edge.
  - c. Leave wax paper installed until the ridge cap is in position then pull the paper off and secure ridge cap to roof panels and into the roof ZEE purlin. (DO NOT OVERLAP MORE THAN 1 RIB)
- 3. Fasten TRIM2 to roof panels and purlins using FAST3. Be sure your fasteners are to the interior of ACC57 so the ACC57 prevents water going through Fastener holes.

## DIRECTIONS

#### **Install Rake Trims**

- 1. Install the TRIM17 with TRIM18. TRIM17 may need to be cut to match panel length. Hide cut edge at top of ridge.
  - a. Begin by applying ACC51 to the bottom of the rake trim's hemmed edge that will rest on the roof panels; leaving the wax paper on until the trim is in place.
  - b. Apply the grayflex closures to the rake trim's hemmed edge that will be fastened to the endwall panels.
  - c. Attach rake then remove any excess paper; giving you a mastic connection to the roof panels and expandable closures at the wall panels. Use FAST23 to fasten through trim and ACC51 & ACC53.
- 2. Attach TRIM18 to end of rake(TRIM17) using FAST20.
- 3. Repeat for the other endwall.

## DIRECTIONS

### Installing the Peak Box

- 1. Install each TRIM19 with pop rivets or lap fasteners into the rake trim. (do not overtighten)
- 2. Remove any excess shaving from the roof panels to ensure shavings are not left behind that might create rust.

### **ENJOY YOUR COMPLETED BUILDING**

Your building is finished. Take a break, relax, and find a way to payback the friends who helped.

# PARTS LIST OPTIONS

Most options both remove and add parts. The following tables list the parts adjustments that are made with each option. Please refer to images at front of assembly instructions if necessary.

ASSEMBLY PART #	MANUFACTURER PART #	DESCRIPTION	QUANTITY	LENGTH
Wainscot Option				
The following items	are removed			
PANEL5	HRL	Wall Panels	-3	12' 5.5"

FAST46	114FINNNECK	.5" X 1.25" Fin Neck Bolt w/nuts	25					

### Install the PURLINs

- 1. Install PURLIN36 on the sidewalls.
- 2. Install PURLIN37 and PURLIN38 on the endwalls.
- 3. Use FAST12 through the 2" side of the angle and aligning the 4" side (pointed up) with the outside steel line of the wall ZEE girt. this will extend the ZEE girts existing 2.5" downward leg by adding 4" upward; allowing for a 6.5" surface area to attach wainscot trim, lower wall sheets, and upper wall sheets.

## DIRECTIONS

### Install the Wainscot Lower Panels

Follow the diagram Step 32 through step 35 from standard instructions to install PANEL20 onto the lower section of wall panels. Fasten top of PANEL20 into PURLIN36/37/38.

### **Install the Wainscot Trim**

Install the TRIM31 and TRIM32 wainscot trim on to the 3'6" girt, allowing the trim horizontal flat surface to rest on top of the lower panels installed. This horizontal line should be level at 3'6". TRIM31 and TRIM32 are interchangeable. Cut, overlap, and install as needed around building.

### DIRECTIONS

#### Install Wainscot Upper Wall Panels

1. Follow Step 32 through step 35 to install wall panels on to the upper section of wall. Fasten bottom of panel to PURLIN36/37/38. Follow diagram on STEP 31. Be sure to leave 1/8" space between wainscot trim and upper wall panels to prevent rusting & discoloration.

## **REMOVE ENDWALL** OPTION

## DIRECTIONS

### **Remove Framed Opening in Endwall Option**

1. When assembling columns H and I in step 11 and 12, use all FAST54, rather than a mixture of FAST54 and FAST46. 2. Repeat steps 6-8 to install wall girts similar to other endwall erected in steps 6-8.

## ADD ENDWALL OPENING OPTION

### DIRECTIONS

### **Endwall Framed Opening Add Option**

1. Assemble columns C and D using steps 11 and 12. Do not follow Step 3. 2. Install PURLIN34 between columns C & D using step 14.

# **GUTTERS** OPTION

Tip: If multiple gutter sections are required to meet the building's length, then sequential gutter(s) will nest inside of the previous gutter's end approximately 4" with a small bead of sealant (ACC52). Fasten the sequential gutter to the previous gutter using FAST20 or FAST23 fasteners then continue until you have fully covered the length of your building, trimming any excess gutter to allow the final gutter end to align with the endwall steel line.

## DIRECTIONS

### **Installing gutters**

- 1. Starting on either end, attach the gutters to the bottom of the roof panel. Allow the gutter to hang in front of the eave trim and fasten with FAST18, beginning at the endwall steel line. Fasten every 1'.
- 2. Reinforce the gutter with TRIM35. Fasten TRIM35 to the top of every other rib (2') in roof panel and fasten to lip of gutter using FAST23.
- 3. Using POP or 78LAP fasteners, attach each TRIM37 by nesting the endcap into the gutter's end approximately 2" with a small bead of clear caulking supplied.
- 4. Repeat this on the opposite sidewall.

## **GUTTERS** OPTION

### DIRECTIONS

#### **Installing gutters**

Note: TRIM38 will be need to be installed after Rake trim (TRIM28) is installed in future steps.

- 5. With gutters now hung, identify the location of downspouts. Downspouts will typically be placed on each end of the building's gutter. The exact location can very (6"-14", but is recommended to position the downspout directly centered over a wall rib, which will allow for a vertical and level downspout once installed.
- 6. Once you have identified your downspout location, mark an "X" at bottom of the gutter to the center of where your downspout will be placed. Each leg of the "X" should extend 2" from center of "X". Using a drill bit to create a hole, and metal snips, cut along the "X". Fold the flaps of the "X" down. This is where you will attach your downspout.
- 7. Attach TRIM36 approximately 4' from the concrete. Attach to the wall rib directly below the "X" created in step above. Additional TRIM36 are provided if desired.
- 8. Attach TRIM34 over the "X" flaps and fasten with FAST23. Place downspout in TRIM36. Check that downspout is level and fasten to TRIM36 using FAST23.
- 9. Apply a bead of ACC52 to the "X" opening in gutter to seal.
- 10. Repeat steps 4-9 for the other downspouts.
- 11. Cover transition from rake to gutter with TRIM28. Pop rivet TRIM28 in place.

# ADD SIDEWALL OPENING OPTION

#### **Sidewall Framed Opening add Option**

You will have flexibility to install this opening in any sidewall bay that suits your needs for every sidewall framed opening section. Once you have determined which bay to place your framed opening in, you will notice that this bay's 2 girts will be replaced with 4 shorter girts and include 2 jambs, 1 header, 2 DJCOLD30 clips, and your framed opening trims and fasteners. One bay must remain sheeted per sidewall-for diaphragm and panel shear bracing of your building, any sidewall bay can contain a framed opening (walk doors are exempt) but one bay must always remain sheeted for engineering requirements.

# SIDEWALL OPENING OPTION

Figure 1 - for 7' and 8' door height

Figure 2 - for 9' door height

## DIRECTIONS

Note: At this point the bases of your jambs are not attached to the concrete. This is fine, as the next step will ensure every connection has been done correctly for your framed opening.

#### For 7' and 8' door height refer to Figure 1

- 1. Using FAST46 attach girt clips (PLATE35) to PURLIN42 at 3'6" from bottom of column.
- 2. Using FAST54 attach the top girt clips (PLATE35) to PURLIN42 at either the 7', 8' location. Continue to step 3.

#### For 9' door height refer to Figure 2

- 1. Using FAST46 attach girt clips (PLATE35) to PURLIN42 at 3'6" from bottom of column.
- 2. Using FAST54 attach the top girt clips (PLATE35) to PURLIN42 at either the 7', 8' location. Continue to step 3.
- 3. Stand each jamb up one at a time and attach top PLATE46 clip to the bottom aligning holes of the Eavestrut (PURLIN30) using FAST54.
- 4. Attach PURLIN51 to assembled jamb (PURLIN42) as shown using FAST54.
- 5. Install PURLIN43 at your installed girt clip location for your framed opening header. Note: At this point, you should have the sidewall framed opening completely installed with the exception of the base connection to the concrete of the two jambs.
- 6. Using a level, level each jamb and drill through the concrete where PLATE35 at bottom jamb will be attached. Use 1/2" wedge anchors or similar concrete fastener to connect to concrete (not included).
- 7. Repeat steps above for every sidewall framed opening selected.
- 8. Use steps 21 & 23 to trim this framed opening.
